5. Reasons for the differences and the revision

Forecast for full-year earnings of the fiscal year ending May 2026 was revised due to differences between forecasts and actual results for the first half of the fiscal year. Forecast for year on year change of ordinary profit for the cumulative period of the first half of the fiscal year was 95.0%; however, ordinary profit dropped more than initially planned due to the pressure on gross profit caused by delaying the timing of price increases in response to high raw materials prices, increased costs due to implementation of advertising as a measure to reduction of number of customers with price revisions, and upfront investment such as hiring costs and personnel expenses for promptly opening multiple stores in the future; as a result, the ordinary profit was 66.9% of the initial consolidated earnings forecast; accordingly, we revise our full-year earnings forecasts in the form of revising our earnings forecasts for the first half and the second half.
